

General Project Description:

The Gene Polissen Center is a ice arena on the Rochester Institute of Technology campus in Rochester, New York. The new arena is the home of the varsity Ice Hockey teams at RIT, replacing the Frank Ritter Memorial Ice Arena. Ravi Engineering & Land Surveying, P.C. provided survey stakeout services for this project. Our scope of work included review of construction documents, location of existing field control and performing control adjustments. Our stakeout included setting the locations of 628 proposed steel piles and marking the cutoff elevations on each of the piles. Using a pile numbering plan from the client, we created an as-built record map for the pile locations.
