

General Project Description:

RE&LS provided environmental engineering services to conduct a complete hazardous materials survey as part of rehabilitation plans for the Civic Center Plaza and parking garage, located in downtown Rochester, NY. The parking garage is a 470,000 SF, two-level, 1,100-space underground parking structure supporting a multi-level municipal office building above. The project entailed conducting a survey of asbestos, poly-chlorinated biphenyls, lead based paints, and suspect glycol contamination throughout the Civic Center Parking Garage and Plaza. The project scope of work also included asbestos and lead based paint abatement design and extensive environmental project monitoring as well as limited construction inspection services.
